

2026 ANNUAL ON PROPERTY SALE

Friday 20th March 2026

Rangan

CHAROLAIS

RANGAN WELCOMES 2026

Dear Clients,

Welcome to our 17th Annual bull sale. In our area and across much of the country, 2025 will be a year we will again be happy to see in the rearview mirror. We had to provide substantial supplementary feeding to our livestock last year. In contrast, areas further north in NSW and Queensland had a strong season, with many cattle from our area heading north again for agistment. We have also had to deal with devastating fires this year. Jess and I have completed several shifts volunteering for the CFA. Every year, I say that farmers need to be resilient, as we can only 'play the cards' we are dealt.

On the home front, Liz and I welcomed our first grandchild, Sophie Audrey Winnett, in January this year. Mum Ellen and Dad Peter are very proud parents. Claire continues to work for the Royal College of Psychiatry in London, but will be at our bull sale as Claire is coming home for a visit. We are very excited to see Claire, as she hasn't been home for nearly two years. Jess has changed accounting firms and now works for Johnsons MME as a senior accountant. Laura has qualified as a registered nurse and has commenced her graduate year in the Emergency Department at Albury-Wodonga Health. We are very pleased that both Jess and Laura have their own Charolais Studs and continue to grow their own herds.

In this year's bull draft, we have added additional sire lines to the mix while maintaining the type of Charolais Bull that suits our southern grass-fed markets. The Rangan female herd numbers well over 200 head, which is the base for the quality we can produce. Early maturing, thick, meaty, polled young sires whose progeny will finish off grass or in a feedlot if required. The Charolais breed delivers significant value to the industry, and we are committed to continuing to provide bulls that enhance our clients' herds. There were some pleasing results in the Victorian weaner sales for Rangan-sired progeny. It was also interesting to note the strong prices achieved from bulls we have sold into other Charolais seedstock programs. The top price bull at the Futurity Pastoral 2025 sale was sired by a Rangan bull, as well as very strong results in the Kandanga Valley bull sale held at Gympie in Queensland.

Gathering information helps us make informed decisions for our herd, but we will never compromise on temperament, structure, or type. We view this information as part of a puzzle whose pieces, when put together, yield the outcomes we seek. We record on every possible calf.

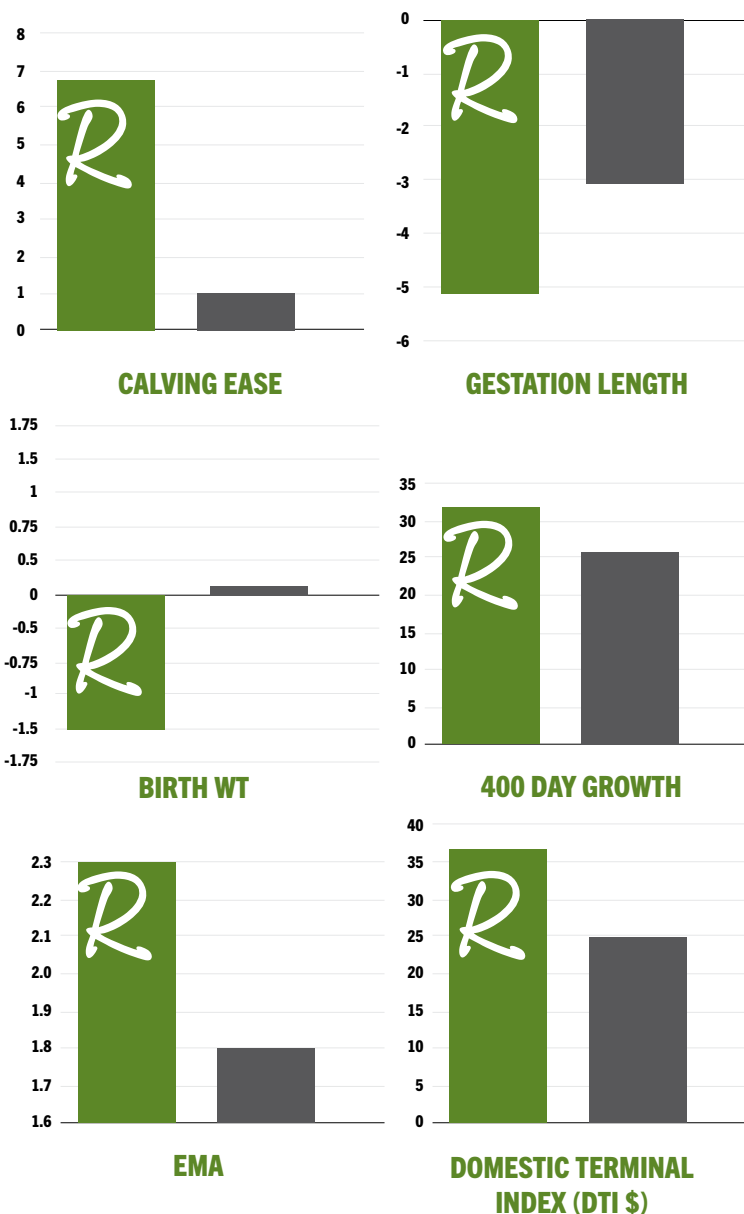

- Gestation Length
- Birth weight
- Calving ease
- Weaning and Yearling weights
- All carcass scans, including eye muscle, fat cover, and IMF
- Scrotal on all bulls
- Genomics
- DNA testing for sire verification, polling, and any genetic conditions

We hope you can attend our sale. To our clients and the wider industry, we wish you a safe, happy, and prosperous year to come.

Thank you

Graeme, Liz, Ellen, Claire, Jess & Laura

2024 BORN CALVES Rangan vs Charolais Breed Average

Rangan

Rangan
CHAROLAIS

FRIDAY 20TH MARCH 2026

41 POLLED CHAROLAIS BULLS

Auction Sale commences 11am - Inspections from 9am sale day or by appointment
"Rangan Park" 41 Miller Lane, Charleroi, Victoria

NOTE: Inspection afternoon Tuesday 17th March, Noon till 4pm

 **AuctionsPlus**
Buy and Sell stock nationally

Sale to be interfaced with Auctions Plus.
Go to auctionsplus.com.au

Directions: Take Tallangatta exit from Hume Freeway, follow directions to Mt Beauty (C531), 14km from Wodonga turn left through Tangambalanga, stay on this road for 12km and you will pass a football ground on your right, 1km further take Miller Lane to your right. (30 minutes travel time from Albury/Wodonga).

Accommodation: Comfort Inn & Suites Blazing Stump Wodonga Ph: 02 6056 3433

Health Information

- All sale animals tested negative for pestivirus
- Fully vaccinated Pestiguard 7 in 1 & Vibrio
- Vetmec F March 2026
- All bulls have been independently vet checked by Seumas McKillop BVSc of the Holbrook Veterinary Centre. They have all passed on examination of the reproductive organs and structural assessment.
- Semen Tested
- J-BAS 6

Bovine Progressive Ataxia

All Rangan sale bulls have been DNA tested for the genetic condition Bovine Progressive Ataxia.

BPAF = Free

BPAC = Carrier - These are not recommended for pure Charolais herds but are okay for crossbreeding programs. Please talk to Graeme Cook if you would like further information.

Agents Rebate

All agents are entitled to a 3% rebate. To qualify they must introduce their client to Rangan Charolais no later than 5pm on the day prior to sale by text or email (preferred) and must settle within 7 days of date of invoice. This clause will be strictly adhered to.

Sale Preparation

Bulls have been prepared for sale without any grain feeding or hoof trimming.

Sire Verification

All bulls have been sire verified by DNA.

Rangan Charolais Guarantee

In the event of a bull proving to be infertile or incapable of natural service in the 12 months from sale date, the vendor will offer to supply a suitable replacement if available, or credit the purchase price to be used at the next sale, less any salvage value of the bull provided the problem is not caused by injury or disease contracted since delivery. Any claim must be accompanied by a relevant Veterinary Certificate. We also offer a two year structural soundness guarantee, please see Graeme Cook for details.

Transport

Bulls will be transported free of charge to major selling centre's within 300km of Rangan Park as well as Dubbo, NSW and where possible delivered direct on farm.

For all your cattle transport requirements please contact:

- Joe Wilton: 0408 739 559

Remember it is extremely important on arrival at your property to have a few steers or cows in the yards to help your new investment settle in.

Catering

Complimentary morning tea and light lunch will be provided.

Insurance

We recommend that you insure your new investment for transit and loss of use insurance for the first breeding season. Please see selling agents for any insurance requirements.

Disclaimer: Any persons entering this property for any purpose what so ever including the attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for the theft, loss or damage to any property caused or contributed to by us or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners their employees contractors or agents and each of them. Whilst all care and attention has been paid to the accuracy in the compilation of this catalogue, neither the vendor nor the agents or representatives thereof assume any responsibility whatsoever for the correctness use or interpretation of the information included in this sale catalogue.

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

Liam Cardile of **BEEFXCEL** service many of the leading seedstock herds in Australia. **BEEFXCEL** is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by **BEEFXCEL** is recognised throughout the industry as Liam is a fully INDEPENDENT assessor.

Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked at closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

Or Call **Liam Cardile** on 0409 572 570 (*Pictured below left*)

Rangan Charolais STRUCTURAL PROGRAM:

The 2026 'Rangan Charolais' Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft.

Liam Cardile - BEEFXCEL Assessor

The Beef Class Structural Assessment System - scoring diagram

Estimated Breeding Values (EBVs)

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination & hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length & therefore easier calving & increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic

differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Domestic Terminal Index (\$) [DTI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with a British breed cow base (e.g. Angus) targeting the domestic trade. This index assumes all progeny will be marketed with steers finished in the feedlot for 90 days, and weighing 450 kg (250 kg HSCW and 7 mm P8 fat depth) when marketed at 12 months. Heifers will be in the feedlot for 75 days, and weigh 430 kg (230 kg HSCW and 9 mm P8 fat depth) at 12 months. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Maternal Index (\$) [NMI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial self-replacing herd where Charolais bulls are joined with Bos indicus cows in Northern Australia targeting the grass fed Jap Ox market. Selected heifers are retained for breeding and so maternal traits are of importance. Steers target 650 kg live weight (360 kg HSCW and 12 mm P8 fat depth) and heifers 630 kg (340 kg HSCW and 14 mm P8 fat depth), at 26 months of age. In response to industry feedback; positive emphasis has been placed on finishing ability.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives R particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

For further information, contact the Charolais Society (02 6771 1666) or Charolais BREEDPLAN (02 6773 3059).

Notes: **Trait leader Low Birthweight, 400d Weight & Scrotal.** Hard to express just how pleased we are with how this great bull is breeding. Queenslander continually give us the progeny that suits our southern industry. Quiet, naturally thick, early maturing with breed leading fat cover. His draft of progeny in this sale speaks for itself. Rising 7yo, Queenslander has stayed as quiet and sound as the day he arrived here. Our hope is to have him on display on the day of the sale.

Notes: Valentino was a bull we selected for use in our spring 2025 stud joining program over a group of first-calving heifers. He was selected for his physical type, pedigree, and strong breedplan data. A long-made bull with a smooth muscle pattern and good skin type. Born at just 38kg from a very productive female that has produced 6 calves in 6 years. Some very good bulls in his pedigree, including both Gauguin and Pinay. A bull we believe is worthy of consideration as a stud sire.

Notes: Valerian is one of my pick bulls in this year's sale. If he were homozygous polled, I would have no hesitation in recommending him for stud duties. Set up so well through the head, neck, and shoulder, back into a long, smooth body that carries thickness all the way to his tail. Valerian's dam has produced 6 calves in 6 years, with 2 females retained. His maternal grandsire, Platinum Windfall, requires no introduction, as does his maternal granddam, Showgirl P82, a breed legend. This bull will stand a very close inspection.

Notes: Sire Alert, Valor is very similar in type to the previous lot. Long-bodied and set up very well through the shoulder and neck, with this bull being homozygous polled. A low-birthweight, high-growth bull with very good carcass data. His dam is one of our very best females, quiet-natured, well-structured, with a neat udder as a rising 8-year-old, and as with the previous 2 lots, has produced 6 calves in 6 years. His sire, Goldrush M151, has bred very well in our herd and has had several high-selling progeny for our stud.

Notes: Victor, to my eye, is one of the most attractive bulls in the sale. A bull that I have admired in the paddock since a calf, sired by Rosedale Remington, who remains sound as a rising 6yo stud sire. Smooth-bodied, with a good muscle pattern; his data show calving ease, low birthweight, with big EMA and fat covers for finish.

Notes: Vance is the first bull to be offered by Rangan Tex, who sold to stud at our 2024 bull sale. A bull that exhibits a touch more frame, perfect for adding more scale in his progeny. Vance is a growth curve bender, low birth to breed top 3% 400d weight. A lot of maternal strength in this bull, with Landis, Pinay, and Doc Silver in his dam's genetics. This bull has done very well to be born at just 37kg from a 2yo maiden and then to stand at over 800kg by sale day.

Notes: Vincent is similar in frame to the previous lot. Sired by a bull we used over stud heifers before being sold to the Taylor family for their commercial Charolais operation. Born at just 37kg from a first calf maiden, and to keep up with the heaviest in the draft by sale day, just shows this bull's growth potential. A nice-headed bull, with a smooth shoulder and neck, displaying plenty of breed muscling.

Traits Recorded: CE,BWT,200WT,600WT,SS,FAT,EMA,IMF,Genomics

Notes: Vibrant, Queenslander x Goldrush M151, hard to come up with a combination for industry-relevant bulls any better genetically. Low birth weight, good growth, with breed-leading fat cover to finish progeny as early as possible. Vibrant is medium-framed, very thick, with a good muscle pattern; he is one of the youngest bulls in the draft. His structural scores are near perfect.

Aptly named Valuable, this bull is one we are confident that, if given the chance, will make a significant contribution to the Charolais breed. True to his name, Valuable exemplifies great quality; he has extra thickness, stands on a wide base, and oozes softness.

The Queenslander sons are a feature of this year's sale, and we rate this lot 15 as the best. Valuable's data set is unrivalled in the breed. He combines low birth weight with strong 400-day growth, impressive milk production, excellent scrotal size, outstanding eye muscle area (EMA), and superior fat cover. These traits culminate in his standing as the number-one-indexing Northern Maternal bull in the entire breed.

Valuable's genetic profile is built on some of our most consistent and high-value bloodlines. Queenslanders' impact on our herd cannot be understated. His dam, Showgirl S5, ranks among our top young females, having produced three outstanding progeny in three years.

Showgirl S5's own sire, Quarterback Q86, was the top-selling bull in our 2021 sale, purchased by Ascot Stud. On the maternal side, Showgirl's grandsire, Goldrush M151, is a son of Ascot Goldrush J37, our highest value-producing bull, whose progeny sales have exceeded \$380,000. The pedigree of Showgirl S5 is a blend of some of the most influential Charolais genetics employed in the industry over the past two decades.

- Pinay
- Lt Rio Bravo
- LHD Cigar
- Lt Bluegrass
- Montana Silver
- Lt Wyoming Wind
- Lt Ledger

Valuable has already been identified as an ideal candidate for the dairy beef industry. Semen rights on Valuable are under discussion and will be finalised prior to sale.

Notes: Vital, thick, just so soft, with a quiet disposition. Here again, Queenslander x Goldrush M151 has hit the mark for our southern beef industry. Vital has a similar data set to the very good lot 15. Calving ease, low birthweight, short gestation with very good fat cover. Vital was identified as a standout calf at our Fairyknowe property by Corcoran Parker agent Jed Cardwell. Good job Jed!

Notes: Validate was another yearling bull that we selected for use in our stud program last spring. Again, the Queenslander X Goldrush combination continues to breed the bulls we are looking to produce. A high growth bull with a big scrotal (Actual 42cm) and fat cover. Validate has taken time to re-integrate into the large bull mob and is now behind in condition as a result. Don't miss him, well worth consideration.

Notes: Varrick, is a very good bull to be sitting at lot 30. A big, strong, muscular, upstanding Charolais sire. A bull that has exceptional growth data, and you can see that he shows that in the flesh, and being homozygous polled just adds to his appeal. He is very well-bred on his maternal side. We consider his dam, Showgirl Q35, one of our best young females, and she goes back to the Pinay/Showgirl F25, who bred very well for our stud. Possibly a real sleeper late in the sale, that if a stud is looking for an outcross sire, he may just be worth a look.

Notes: Verbal has quite a story behind his sire. T184 was used as a backup bull in our 2023 stud joinings, being the Ascot Queenslander/Goldrush M151 combination, and then sold in our 2024 sale to very good clients, the Pearce family from Kergunyah. After the sale, a stud was trying to buy the bull from them; to their credit, they kept the bull. Verbal is very similar in type to the previous 3 lots. Calving ease, good growth, and plenty of fat cover to finish his progeny as early as possible. A big scrotal bull (actual 43cm) that shows a bit of presence in his pen.

Traits Recorded: BWT

Notes: V-Line, built like the proverbial brick out house. Another bull sired by the consistent Goldrush M151. V-Line displays extra bone and plenty of muscle, yet still maintains calving ease, very good growth, and carcass merit.

Traits Recorded: CE, BWT, 200WT, 600WT, SS, FAT, EMA, IMF, Genomics

Notes: Vintage is a polled, red factor bull with very good calving ease, low birthweight, and carcass data. A long-bodied bull with a slick skin type that stands on well-set-up feet and legs. Vintage's dam is a very productive young cow purchased from the Gates Charolais dispersal.
